Water:

- 97% of Earth's water is undrinkable.
- H₂O regulates the Earth's temperature
- 68% of **fresh water** is trapped in glaciers and 30% is underground.
- 6,800 gallons of water is required to grow a days food for a family of four.
- 780,000,000 people do not have access to improved water sources.
- 1/3 of what the world spends on bottled water in one year could pay for projects providing water to everyone in need. Refilling a H₂O bottle with tap water 1,740 times would cost \$.99.
- It takes 120 gallons of H₂O to make one egg.
- 70% of your brain is water.
- H₂O is the only substance that expands & when H₂O expands and it expands 9% of its volume.
- The U.S. draws more than 40 billion gallons of H₂O from the Great Lakes every day.
- 80% of the world's population lives in the driest half of the planet.
- H₂O is the most common molecule in the universe after Hydrogen.
- At some point the water within you was in a dinosaur.
- One drop of water from a river, lake or ocean is a world in miniature containing thousands of tiny organisms; algae, protozoa, bacteria or viruses.
