Pythagorus believed nothing exists without a center around which it revolves.

The pythagoreans begged the question "How does one become many?"

"Oneness"
Ancient mathematical philosophers referred to the "Monad" (Greek) as "The First. "The Seed", "The Essence", "The Builder", "The Foundation" and "Unity".
When any number multiplied by 1 = it remains itself.
When any number is divided by 1 = it remains itself.

1. The Doorway

"Everything in creation has it's opposite" David Sutton

2. The Triad (symbol for 3)

The first of many shapes to emerge
3 is unique : the only number whose sum with those below. 1+2 +3 = 1x 2x 3
Ancient mathematicians / philosophers considered 3:
Prudence, Wisdom, Piety, Friendship, Peace, and Harmony. The shape of the Triad was about relationships and balance.
