

Ii

Indian Corn:

- One of the oldest varieties of corn
- Corn originated from a wild Mexican grass called Teosinte. Each plant can have 100 ears with only 10 grains each.
- Corn as we know it does not occur naturally.
- Humans and modern corn are dependent on each other.
- Humans started developing corn 7,000 years ago.
- Every seed we encounter is the result of a single pollen grain making its way to a stigma, growing a narrow tube down a style and fertilizing a single ovule.
- "We protect what we fall in love with."
Louis Schwartzberg
- Earth has 80,000 edible species
- 90% of the food comes from 30 plants grown in the world. Corn is the second highest grown crop in the world. Sugar cane is first.
