How to Find the Middle of a Line

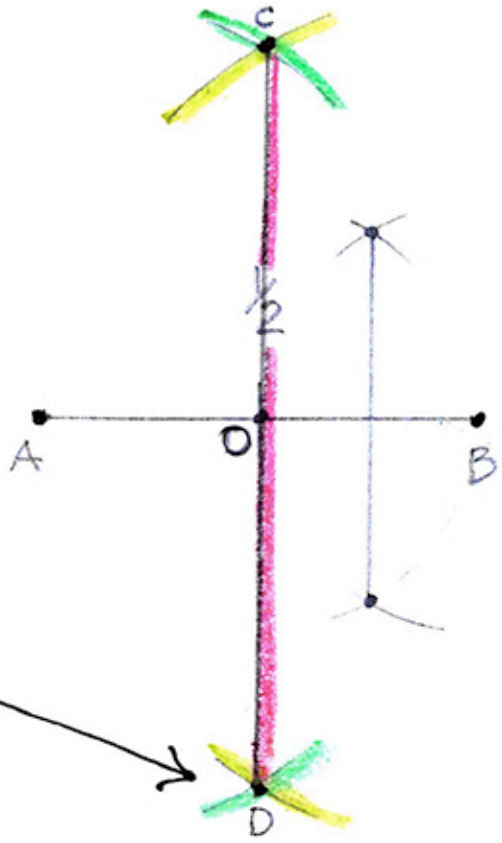

Directions:

1. First draw a horizontal line segment
2. Label it A and B
3. Take your compass and measure - be exact!

Then take that measurement very carefully and put the compass pin on A and use the pencil end to make an arc.

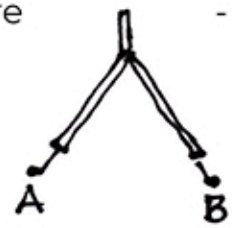

4. Then put the compass pin on B and make the other arcs. X marks the spot!
5. Label  where the arcs cross C and D.
6. Use your ruler to draw the line that is exactly in the middle!  Label it O.
