Water:

- There is the same amount of water on Earth today as when the Earth was formed.
- A dishwasher uses 4 gallons & hand washing uses 20 gallons.
- Chickens & goats are the least H₂O consumers of animals.
- Hot water can freeze faster than cold water, its called the Mpemba Effect and was discovered by a student.
- It takes 70 gallons to fill a bathtub.
- A swimming pool loses 1,000 gallons a month due to evaporation.
- An acre of corn gives off 4,000 gallons of water per day in evaporation.
- In approximately 100 years a water molecule spends 98 years in an ocean, 20 months as ice, 2 weeks in lakes and rivers and less than 1 week in the atmosphere.
- There is more fresh water in the atmosphere than all the rivers on the planet combined
- NASA has discovered water in the form of ice on the moon.
- 1 lb. of beef requires 1,799 gallons of H₂O.
- A slice of bread requires 11 gallons of water.
- An apple requires 18 gallons of water.
- 500 sheets of paper takes 1,321 gallons of water.
- Ground water occurs almost everywhere beneath the land's surface.
- All water on the Earth has been recycled through animals, plants, rocks, oceans, and clouds.
- All living things need water to survive.
- All water on Earth arrived as ice on asteroids and comets from space.
- Ice is less dense than water and insulates the water underneath it.
- Capillary action overcomes the force of gravity allowing plants to move water from roots to their leaves. This unique property allows oxygen & nutrients to reach the outer most edges of your brain.
